Technical Skills

- Python
- Java
- HTML
- CSS
- Object-Oriented Programming
- MySQL (Database language)
- Database Management
- Problem Solving
- Project Planning
- Debugging
- IT Technical Support
- Communication skills
- Customer Service
- Adaptability
- Microsoft Office applications
- Troubleshooting
- Task Management
- Data Privacy
- Web Design
- Typography
- Responsive Designs
- Content management

My Story and Experience

I chose to come into the technology field from the time I was in primary school. I have worked with computers and technology from a very young age. I learned and helped my dad and family members/friends with a lot of troubleshooting and computing errors. I had this dream and passion of perfecting something in the IT field. I knew that it would not be easy and simple, so I started gathering information from Google and different sources on the internet, including questioning people that were already in this field and had experience for my self-knowledge.

As time passed and i got into secondary school, I realized that technology is growing much faster and rapidly then before. That was also another reason that pushed me into gathering more information and knowledge. By this time I have made my mind in getting into the IT field (Software Engineering). Fast forward to when i started coding, it got really challenging. There were times where I got stuck and blank but never have I given up on any of my tasks, projects, work and goals until today. I pushed myself forward to reach the end of it.

This is a small message about myself.

Education

02/2015 - 10/2018

Nizamiye Combined School, Midrand.

03/2019 - 10/2019

GED Education.

You may hear other meanings for GED such as Graduate Equivalency Degree or General Educational Diploma. However, GED traditionally stands for General Educational Development Test. After graduating from high school, you will receive a diploma. This is known as the GED test.

02/2020 - 10/2020

Hyperion Development Bootcamp.

Hyperion Development is a Software engineering, Web development and Data science bootcamp where you learn to code and use computer languages and much more. Hyperion Development bootcamps are structured programs with progressive levels of difficulty, from beginner to advanced.

Preferred Language

English

— B2
